Hawking 's Death leaves a World of Confusion.

The world is reflecting on the tragic death of Stephen Hawking. The Scientist of our generation. He died of Motor Neuron disease.

He died at the age of 76 but was told at the age 26 that he had two years to live.

He died peacefully in his Cambridge house in the early hours of Wednesday 14th of March 2018.

The scientist that based his life on a theory.

The world reflects on his life and what he did for us all.

He came up with the theory of black holes, changing Quantum Physics forever.

Stephen Hawking said himself “I believe alien life is quite common in the universe, although intelligent life is less so. Some say it has yet to appear on planet Earth”.

Quote continued : “When people ask me if a god created the Universe, I tell them the question itself makes no sense. Time didn’t exist before the Big Bang , so there is no time for God to make the universe in. It’s like asking for directions to the edge of the Earth. The Earth is a sphere. It does not have an edge, so looking for it is futile exercise”.

The legacy of Professor Stephen Hawking will live on. He has inspired the next generation of people.

He will always be remembered as the scientists who gave us a future.
